

How have you been during the pandemic?

The research group CHAP, Child Health and Parenting, have been assigned from the Public Health Agency of Sweden to, during the fall of 2020, investigate how the covid-19 pandemic has influenced/influences children and adolescents with disabilities and their families.

We would like to know what children and adolescents think about corona.

We want to get in touch with children and adolescents who get support from the habilitation and their parents or caretakers to conduct interviews. We would like to hear both the youth's/children's thoughts and how you as parents have experienced the pandemic.

- The interviews can be conducted through video-calls or meetings. Naturally, we will use protective equipment such as a visor to protect children and youth in risk groups. Every interview will be adjusted for your specific situation.
- The interview will be adjusted for the child's needs and means of communication.
- Interviews will be held either through talking conversation with image support if needed or through a computer based interview tool, In My Shoes, as the research group CHAP has contributed to and introduced in Sweden.
 - Naturally, the interview will be supported by the child's possible augmentative and alternative communication (AAC)-tools.
- Both the child and parents from the same family can participate, but it will be alright if only the child or the parent participate- you choose for yourself who is interested.
- The interviews will begin in November 2020.

For more information about the study and to register interest, please contact filippa.klint@pubcare.uu.se.

We will then reply with more information and are happy to answer any questions about the research.

Responsible researcher for the study is Professor Anna Sarkadi at Uppsala University. Anna.Sarkadi@pubcare.uu.se
